VOTING INFORMATION
Record Date
You may vote all shares that you owned as of January 1, 1000 which is the record date for the Annual Meeting. On January 1, 1000 we had 1,111,111,111 common shares outstanding. Each common share is entitled to one vote on each matter properly brought before the Meeting.
Ownership of Shares
You may own common shares either (1) directly in your name as the shareholder of record, which includes shares purchased through our Shareholder's Stock Purchase Plan (Purchase Plan) and restricted share awards (RSAs) issued under our long-term incentive plans for employees or (2) indirectly through a broker, bank or other holder of shares

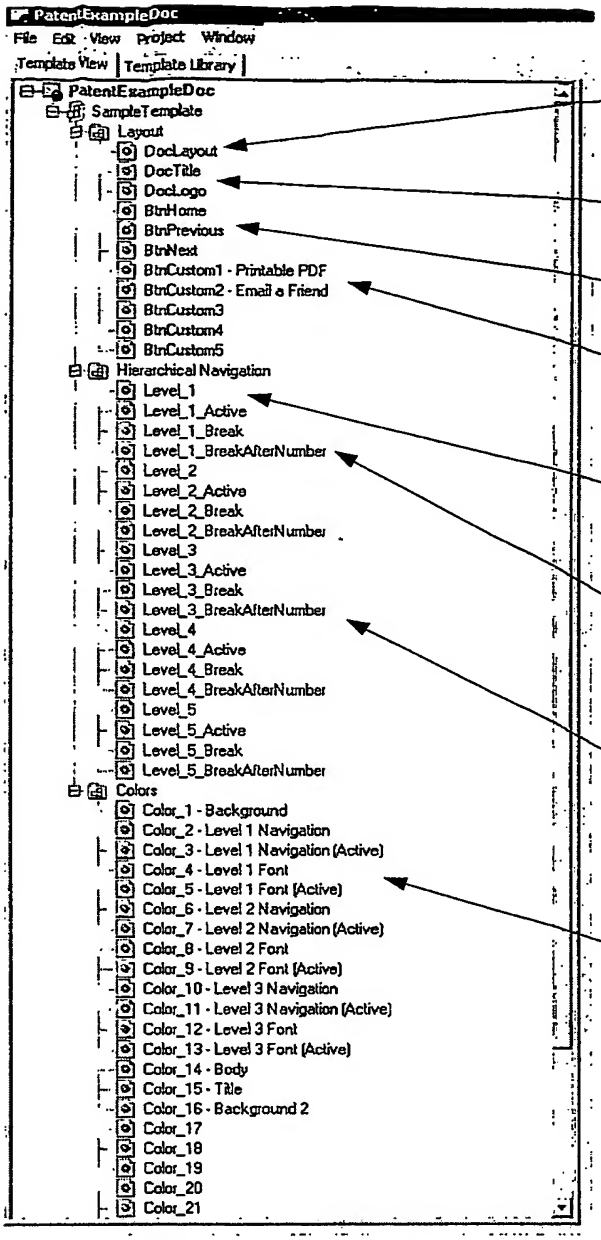
FIG. 5C



DocLayout - stores HTML which describes the layout for each page of the enhanced HTML document. It will include many substitution codes to specify where other template elements are used.

DocTitle and **DocLogo** store HTML for the document title and logo.

BtnPrevious, BtnHome and **BtnNext** store HTML for the linear navigation buttons.

BtnCustom1...5 store HTML for the customized buttons such as "Printable PDF" or "Email a Friend" features.

Level_1 stores HTML for a level 1 hierarchical navigation element while **Level_1_Active** stores HTML for an "active" version of a level 1 hierarchical navigation element.

Level_1_Break stores HTML used to create a "break" between level 1 hierarchical navigational elements. It is applied when processing the next sequential level 1 hierarchical navigational element after the number stored in **Level_1_BreakAfterNumber.**

Hierarchical navigation levels 2 and beyond follow the same definition as level 1 did above.

Color1...30 store HTML for the numerous color settings on templates.

FIG. 6A

Single Substitutions	
{doclogo}	When found, replace with the template element *DocLogo* – after processing *DocLogo* for any substitution codes.
{doctitle}	Replace with a processed *DocTitle*
{content}	Replace with the source HTML content for the page being enhanced.
{btncustom1}, {btncustom2}...	Replace with a processed template element (*BtnCustom1*, *BtnCustom2*...)
Linear Navigation Substitutions	
{btnprevious}, {btnhome}, {btnnext}	Replace with appropriate processed template element. When processing the template element, replace {url} with the proper link code and {text} with the proper descriptive text, based upon outliner information.
{urlprevious}, {textprevious}, {urlhome}...	Replace with appropriate links or descriptive text.
{color1}, {color2}...	Replace with the appropriate template element. Color template elements allow for heavy customization of existing templates.
Hierarchical Navigation Substitutions	
{level1}	Replace with a string that consists of a processed *Level_1* template element for each level 1 page node in the document. Also, use *Level_1_Active* for the level 1 node which is an ancestor of the page being created.
{level2}, {level3},...	Similar to {level1}, but for the defined level. Note: it is common to have a {level3} code in the *Level_2* template element – allowing for recursive navigational control.
{level1_text}, {level2_text}, ...	Replace with the appropriate descriptive text for the active page node at the specified level in the outliner.
{depth}	Replace with a number indicating the hierarchical depth of the target page's level.
{counter}	Replace with a sequential number for each instance of a level 1 element.
Dropdown Navigation Substitutions	
{menu_quickmenupro}, {menu_smartwebmenu1}, ...	Replace with javascript dropdown menu definitions for a specific dropdown menu product. For example, QuickMenuPro can be chosen and the proper javascript menu definitions for QuickMenuPro will be inserted.
